

# Clean Room Rollers

**Clean Room Rollers** are designed specifically for cleaning the interior floors, walls and ceilings of the Clean Room.

This product provides a cleaning solution for dust-critical environments that prevents particles from becoming airborne.

**Clean Room Rollers** can also be used during actual production, minimising down time used for traditional cleaning methods.

## Features:

- Unique adhesive coating stops particles from becoming airborne during cleaning
- Lightweight, with simple handle, causes less fatigue during cleaning process
- Longer handles can be added to unit for cleaning ceilings and high walls
- Perforated for easy disposal of used material
- Soft foam construction allows the roller to conform to irregular surfaces
- Removes the need for vacuum, sweeping, wet mopping or solvents

## Benefits:

- Reduces costs by eliminating the need to close clean room, or shut down production for maintenance
- Minimises dust contamination throughout critical areas of facility

The **Clean Room Roller** is supplied as a sturdy handle and a foam roller. The handle is fitted with a screw thread allowing an inexpensive broom or mop handle to be used to extend the **Clean Room Roller** for hard-to-reach areas.

**Clean Room Rollers** are supplied in **228mm** and **457mm** widths.  
**Clean Room Roller** refills are supplied in a box of four rolls with 20 perforated layers.

Contact Cleaning is a technology that has been successful in many markets for over twenty years – production of printed circuits, cosmetics labels, medical packaging and large format graphics have all benefited from this yield improvement process.
